Dear Hiring Manager,

I am excited to apply for the Quality Assurance Engineer position at iFarmer Limited. With over two years of experience in both manual and automation testing, I am eager to leverage my expertise to enhance software quality and user experience within your dynamic team.

In my role at XYZ Software Ltd., I developed and executed comprehensive test cases for web and mobile applications, ensuring robust functional and regression coverage. My proficiency in automation frameworks like Playwright, Selenium, and Cypress allowed me to streamline testing processes, reducing manual effort by 60% in an e-commerce platform automation project. Additionally, my experience in API testing with Postman, performance testing with JMeter, and CI/CD integration using Jenkins and GitHub Actions has equipped me with a well-rounded skill set to contribute effectively to Agile-driven development environments.

What excites me about iFarmer Limited is its commitment to leveraging technology for innovative agricultural solutions. My ability to collaborate closely with cross-functional teams, identify and resolve defects efficiently, and continuously optimize testing strategies aligns well with your mission to deliver seamless and high-quality software solutions.

I would welcome the opportunity to discuss how my skills and experience can benefit your team. Please find my resume attached for your review. I look forward to the possibility of contributing to iFarmer Limited and would appreciate the opportunity to speak further at your convenience.

Thank you for your time and consideration.

Best regards,

Atunu Saha
